Why Invest In Cryptocurrency?

Cryptocurrency is something that everyone should have an understanding of. Not only can you benefit if you invest in the right digital assets, it will also keep you ahead of the game of the innovation of technology. Individuals that do not take advantage of the implementation of cryptocurrency will inevitably be pushed into the system without choice and without profit. This opportunity that is at the tips of our fingers is similar to the dot-com boom. Many people did not believe in these companies like Amazon and Google, so in return few profited off of these companies global expansion. Though only a small percentage profited, almost everyone in the world uses their technology today. Our goal is to help others see the opportunity that is right in front of them.

We live in an inflationary economy where our government is continually printing money to keep us afloat, though the dollar we use everyday actually has less value than most think. It is not backed by anything solid, sustainable, or secure. Yes, the dollar was once backed by gold, but in 1971, the U.S. went off of the gold standard which made the dollar a fiat currency. Fiat currency definition according to investopedia - *Fiat money is a government-issued currency that is not backed by a physical commodity, such as gold or silver, but rather by the government that issued it which gives central banks greater control over the economy because they can control how much money is printed.* Today, the dollar is on its last leg of survival and losing any value it had.

We see these effects happening all over the world. From the BRICs nations cutting off all connection from the western monetary system to the fact that Saudi Arabia abandoned the dollar by making a 50 year agreement with China for their oil sales which takes away the only value of the dollar (the petrodollar). We see the world moving away from the western monetary system (the US dollar) and declaring to move to a new monetary system **based on blockchain and backed by gold**. It is also a fact that the new monetary messaging system will be fully implemented by 2025. This new messaging system is compliant with 6 digital assets that will work alongside the messaging system in order to run the new monetary system. Investing in these digital assets is investing in the future of our world.

Many people do not know these facts about cryptocurrency or where our world is at. When most people know these facts, it will be too late. Don't be subject to the ushering in of the new monetary system, instead take advantage of the opportunity that lies before you. We believe this is and will be the greatest wealth transfer in history.
